InfinitePlay PC Windows App

Now available a PC application (Windows OS), which allows you to answer the video door entry unit from any PC connected to the network. The program has been designed to be light and minimally invasive, so not to disturb daily work. At rest position the application resides in the hidden bottom bar. When an incoming call start, a small bar show a minivideo of the visitor and the buttons to answer/end or open the door without having to answer

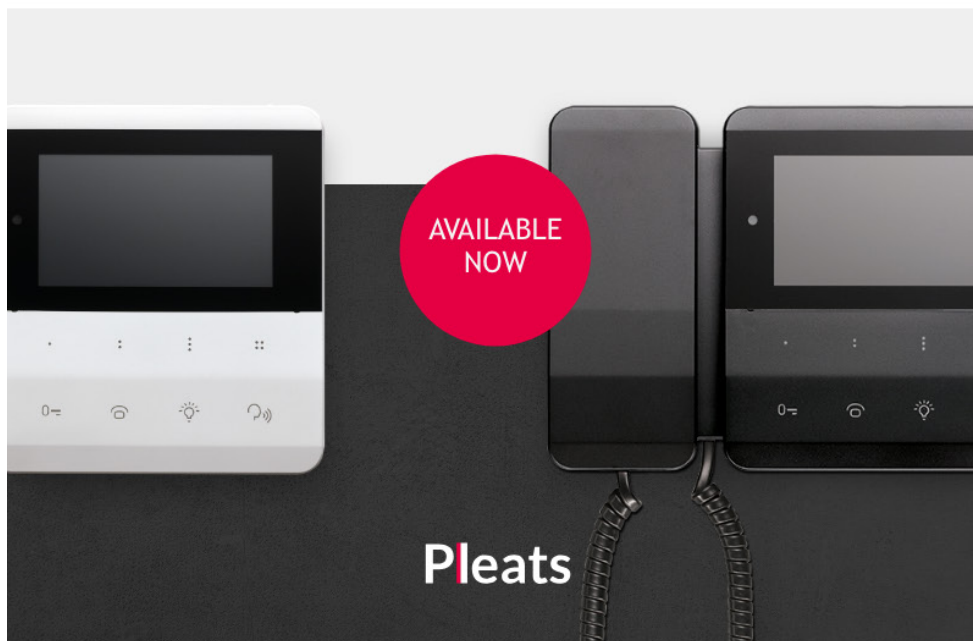

By pressing the minivideo you can have a large and detailed video and then respond and open the door even after the answer. Commercial policy with licensing packages facilitates use application in companies, where it can adequately replace one person dedicated to entry, allowing more people not dedicated, also in different times to respond despite having multiple tasks.

New features

Remote **control**

InfinitePlay has introduced full support for the TeamViewer; now you can check and change the system settings by accessing the monitor in the following cases:

PRESIDED ACCESS

The end user or installer starts the "QuickSupport" application and remotely through a PC equipped with Teamviewer, they can connect to the monitor after the user's consent.

NOT PRESIDED ACCESS

Configuring the videomonitor with the application "Host" the installer or administrator, even of more plants, can check and keep groups of monitors without the need for a present person.

Market **applications**

InfinitePlay has introduced a dedicated market to be able to insert Android app of third parties in the monitor. App for camera control, audio control, home automation... Have been included, but more applications can be added so you can make the monitor a single home control tool.

Improvements

Internal devices

InfinitePlay has made numerous changes to internal license devices, to improve its functionality and use.

SPEED VIDEO INPUT

Thanks to software refinements and the new function programmable camera "Never Go Standby", the video arrives in about 3 seconds from the start of the call.

AUDIO POWER

Thanks to calibration measures it was possible to increase the power sound, making the ringtone level much more powerful.

STAND-BY MONITOR

The monitor in standby mode, turns completely off the display to avoid disturb, especially during the night hours.

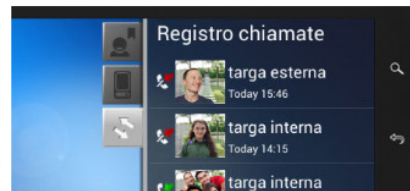

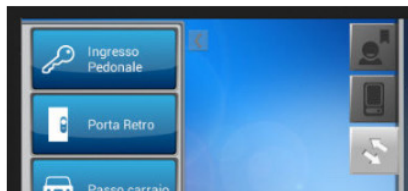

CHANGE ACTUATORS NAMES

Possibility to assign names and icons customized to the various functions, to be able to better identify the buttons to open the gates.

CALLS SCREENSHOT

The monitor can capture the image of the caller to the ring and memorize it in the call log, differentiating by type of call.
